## Market Comment:

Financial media has made much of the recent US equity winning streak. The S&P 500, for example, initially exceeded its pre-COVID all-time-high last August and has moved on a fairly consistent upward path since November. Frequently the media coverage implies we should be worried about all-time highs, but that narrative misses the broader context – equity markets trade at or near all-time highs a majority of the time.

Over the last 50 years, the S&P 500 has traded at an all-time high about 7% of the time. It has been within 10% of an all-time high over 60% of the time. All-time highs are normal, not exceptional, in equity markets, and are certainly not a bearish indicator on their own.
